

SPA-D

SET POINT ADJUST (ONLY)

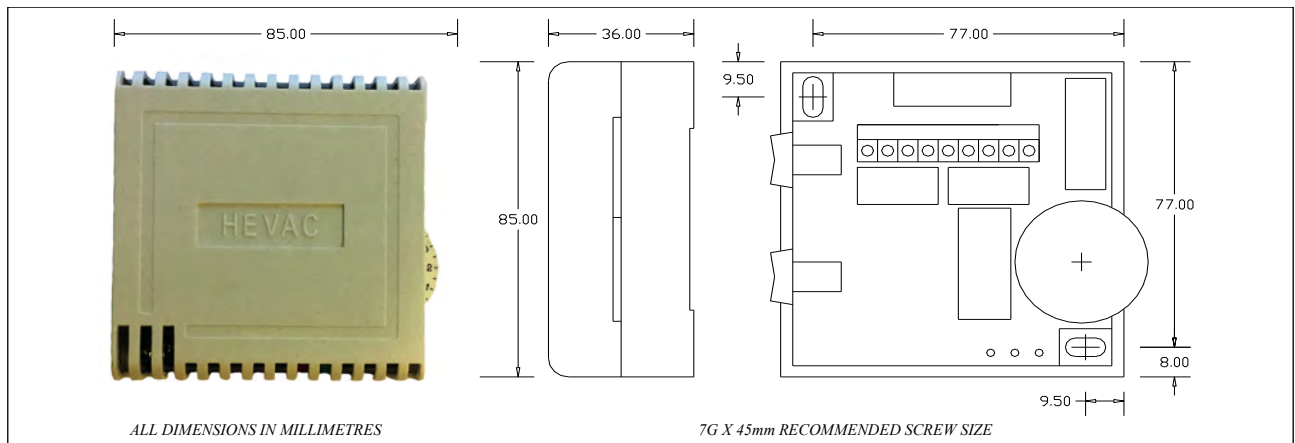

The SPA is an adjustable setpoint device built in the form of a room temperature sensor. It is intended for use with Hevac HTC3, 5 & Digital series of controllers as a means of having a remote setpoint adjustment away from both the sensor & controller location . Both a concealed and exposed adjustment knob are supplied. The setpoint range is 18~25c

Features

- Large terminals for easy wiring.
- Supplied with both concealed & exposed set point adjuster.
- Neutral color
- Fire retardent ABS plastic.
- Resistant to color fade

Dimensions

When used as a remote setpoint in conjunction with HTC3 or 5 temperature controllers, dip switch 3 on the controller needs to be set to the "YES" (on) position which disconnects the controllers setpoint and allows remote setpoint operation. When used in conjunction with the HTC-DIGITAL-LCD controller, the controller will automatically detect the SPA-D connection and hand over setpoint control to it.
