## Air damper actuators

GIB..1E

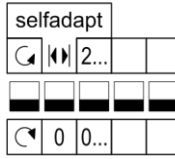

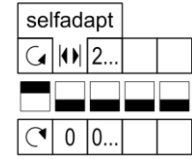

### Electromotoric rotary actuators for 2-position, 3-position, and modulating control

- Nominal torque: 35 Nm
- Operating voltage: AC 24 V ~ / DC 24 V = or AC 100...240 V ~
- Mechanically adjustable span between 0...90°
- Pre-wired with standard 0.9 m connection cables
- Type-specific variations with adjustable offset and span for the positioning signal
- Position indication: mechanical and electrical
- Feedback potentiometer
- Self-adaptation of the rotation angle range and adjustable auxiliary switches for supplemental functions

Rotary actuators are used in ventilation and air conditioning plants to regulate and shut off air dampers:

- For damper areas up to approximately 6 m<sup>2</sup> (Guideline: Always comply with the damper manufacturer's specifications).
- Suitable for use with 2-position and 3-position controllers as well as modulating controllers (DC 0/2...10 V) to control air dampers.
- We recommend a minimum pulse length of 500 ms on rotary actuators operated with 3-position control to ensure continuous and accurate operation.

		<ul style="list-style-type: none"> <li>• ... if the positioning signal is maintained at a constant value;</li> <li>• ... in the event of power loss.</li> </ul>	
Position indication	mechanical	Rotation angle position indication using a position indicator.	
	electrical	-	Position indicator: Output voltage U = DC 0/2...10 V is generated proportionally to rotation angle. The direction of rotation (inverted or non-inverted) for output voltage U is based on the DIL switch position.
Auxiliary switches	The switching points for auxiliary switches A and B can be set independently in increments of 5° from 0° to 90°.		
Self-adaptation of rotation angle range	-	The actuator automatically determines the mechanical end positions of the rotation angle range. The characteristic function (U <sub>0</sub> , ΔU) is mapped to the calculated rotation angle range. Power must be applied for the function of DIL switch 2 (self-adaptation) to be operational.	
Manual adjustment	The actuator can be manually adjusted by pressing the gear train disengagement button.		
Rotation angle limitation	The rotation angle of the shaft adapter can be limited mechanically in increments of 5°.		

## Technical design

### Housing

- Robust and light cast aluminum housing. The housing guarantees long life, even under challenging ambient conditions.

### Actuator / gears

- Brushless, robust DC motors ensure reliable operation regardless of load. The valve actuators do not require an end position switch, are overload proof, and remain in place upon reaching the end position.
- The gears are maintenance free and low noise.

## Safety

 **CAUTION**
**National safety regulations**

Failure to comply with national safety regulations may result in personal injury and property damage.

- Observe national provisions and comply with the appropriate safety regulations.
- Mounting, commissioning, and service by properly trained personnel only.

## Engineering

**Auxiliary switch and potentiometer**

Cannot be integrated after the fact.

## Mounting

See mounting instructions A6V14196968.

**Shaft connection**

When mounting, comply with the notes on shaft diameters and damper surface areas (Use [► 2], Technical data [► 9]) and use only quality materials typical to the sector for the damper shaft.

## Installation

 **WARNING**
**No internal line protection for supply lines to external consumers**

Risk of fire and injury due to short-circuits!

- Adapt the wire cross sections as per local regulations to the rated value of the installed fuse.

## Maintenance

---

The GIB..1E actuators are maintenance-free.

## Disposal

---

This symbol or any other national label indicate that the product, its packaging, and, where applicable, any batteries may not be disposed of as domestic waste. Delete all personal data and dispose of the item(s) at separate collection and recycling facilities in accordance with local and national legislation.

## NOTICE

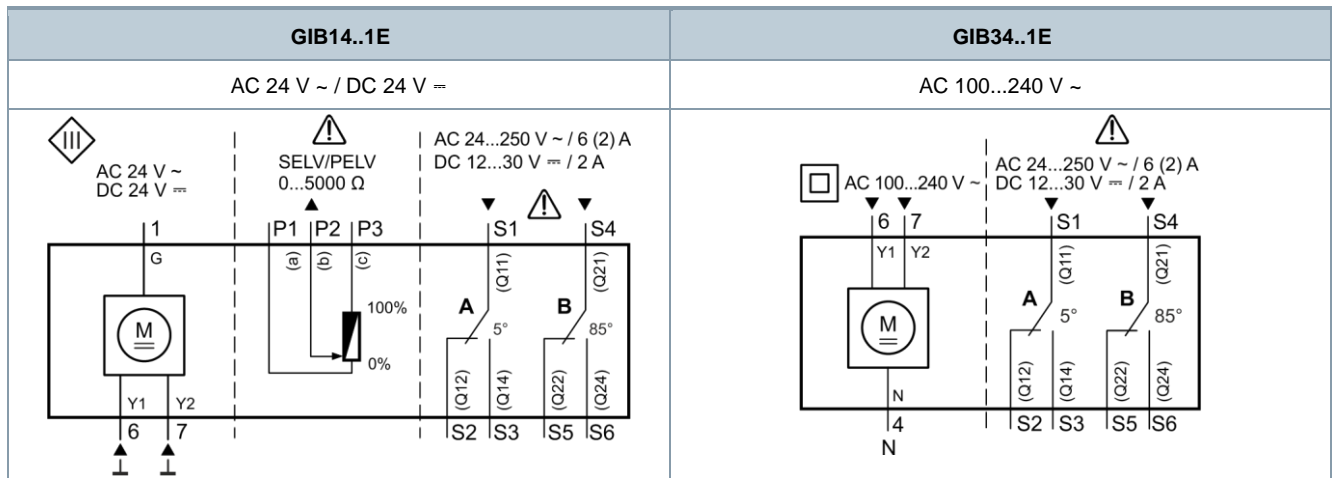

### Shaft connection – Important notes for the manufacturer / installer

Use of unsuitable damper shafts may damage the damper or damper shaft.

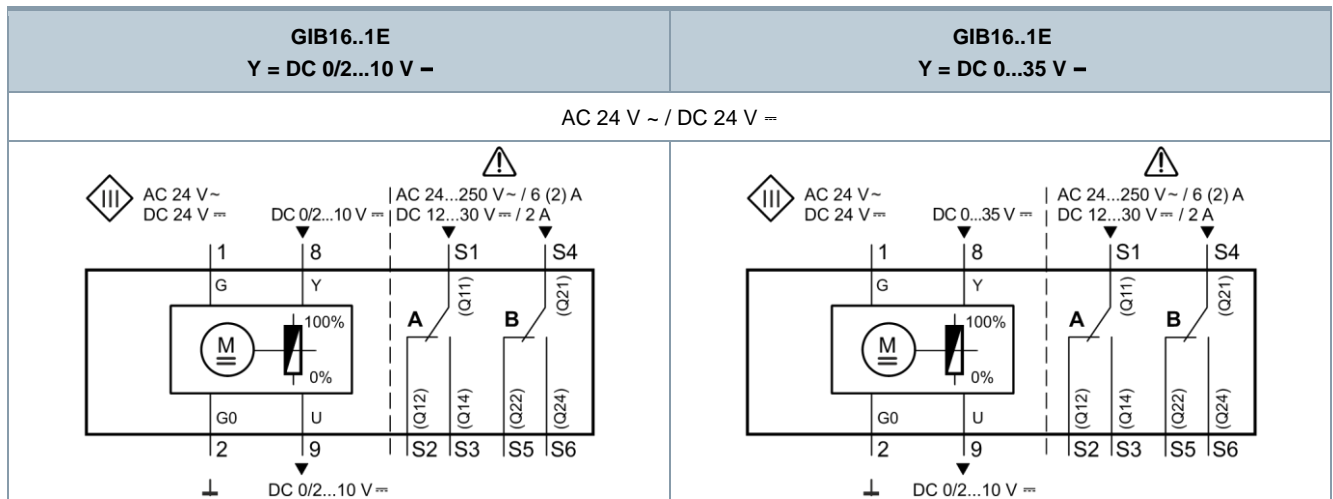

- Use only damper shafts with diameters suitable for the damper surface.
- Use only quality materials typical for the sector for damper shafts/rods.
